Infosys Springboard Virtual Internship 6.0 Completion Report

Batch Number - 13

Start date – 02-02-2026

Names:

- Ambashree
- Ajay D A
- Appapurapu S Naga Venkata Sasank
- Ashwini Pathe
- Burgala Swathi
- Gnana Teja Sri
- Gorty Sree Naga Venkata Sravani
- Hardik Pandey
- Manikanta Gedda

Internship Duration: 8 Weeks

Food Trends Understanding Customer Preferences in Foods and Beverages

1. Project Objective

- Analyze calorie intake and macronutrient distribution across meal types
- Evaluate the relationship between physical activity levels and BMI
- Identify patterns linking dietary habits with disease risk
- Examine the impact of breakfast on overall nutrition and health outcomes
- Develop an interactive Power BI dashboard for actionable insights.

2. Project description in detail

- Developed as part of the **Infosys Springboard Virtual Internship**, focusing on **food trends, customer preferences, and health analysis**.
- **Objective:** To analyze relationships between **nutrition, lifestyle, BMI, and diseases** using interactive dashboards.
- **Data Preparation:**
  - Collected data on food items, calories, macronutrients, BMI, age, activity levels, and diseases
  - Cleaned and transformed data using **Excel and Power Query**
- **Data Modeling & DAX:**
  - Built structured data models in **Power BI**
  - Created DAX measures like:
    - Total Calories, Protein, Carbohydrates, Fats
    - BMI and Calorie Surplus/Deficit
    - Dietary Risk Index
  - Enabled **dynamic filtering and interactive analysis**

Dashboards Overview

- **1. Dietary Preferences & Averages**
  - Analyzes food categories, top items, and nutrient distribution
  - Shows meal-wise calorie contribution
- **2. Nutrients & Diseases**
  - Examines relationship between **BMI and disease risk**
  - Identifies high-risk groups using Dietary Risk Index
- **3. Breakfast Suggestions**
  - Compares breakfast options based on **calories and nutrients**
  - Helps identify **balanced and healthy choices**

- **4. Lifestyle & Nutrition Impact**
    - Analyzes how **activity level and diet affect BMI and nutrition**
    - Shows relationships like calories vs protein

Technologies Used

- Power BI for dashboard creation and visualization
- Power Query Editor for data cleaning and transformation
- DAX for analytical calculations and metrics
- Data storytelling techniques for effective vizualization

Real-World Impact

- Helps in **health risk identification** based on BMI and diet
- Supports **food industry** in understanding customer preferences
- Assists in **fitness and diet planning**
- Enables **data-driven decision-making**

Conclusion

- Demonstrates how **data analytics and visualization** can convert raw data into **actionable insights**
- Provides a complete solution for **nutrition, health, and food trend analysis**

3. Timeline Overview

Week	Activities Planned	Activities Completed
Week 1	Project Understanding	Requirement Analysis
Week 2	Data Collection	Dataset Finalized
Week 3	Data Cleaning	Excel & Power Query used
Week 4	Data Modelling	Relationships Created
Week 5	DAX Implementation	Measure Created
Week 6	Dashboard Design	Visuals Built
Week 7	Testing & Improvements	Interactivity Added
Week 8	Final Submission	Presentation Completed

4a. Key Milestones

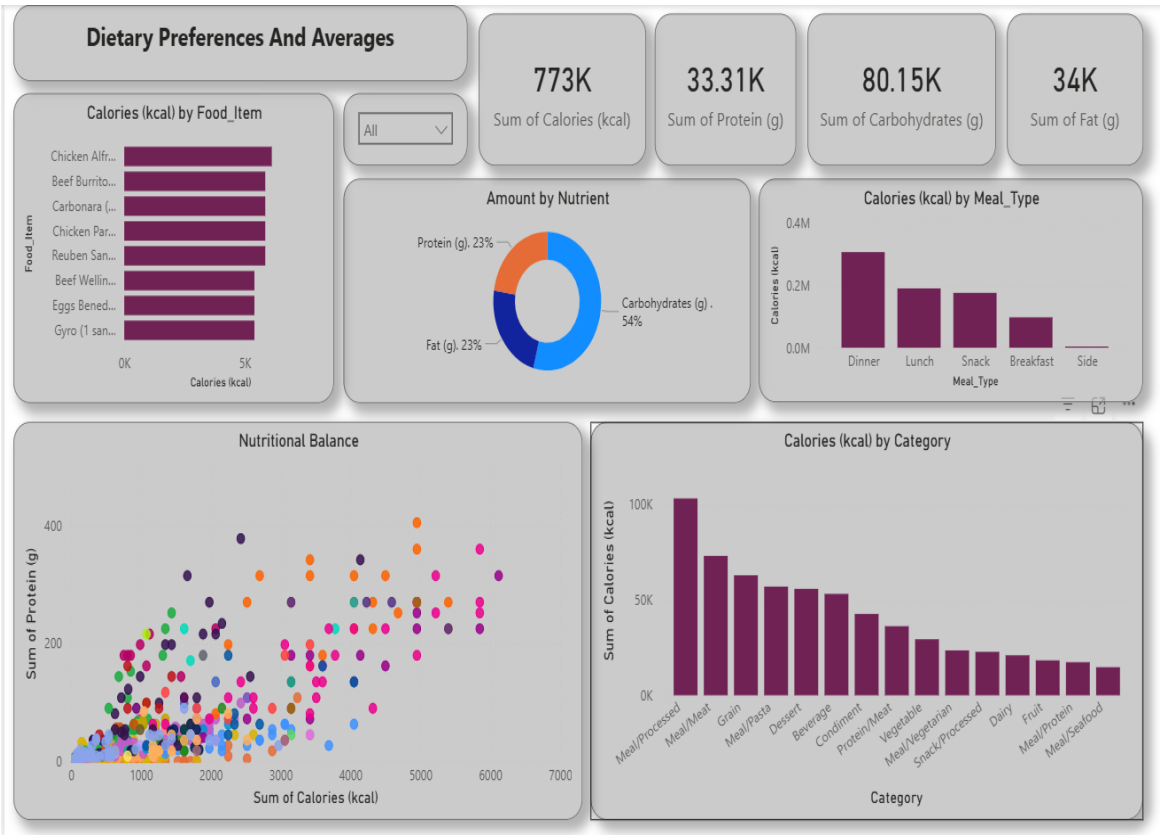
Milestone	Description	Date Achieved
Project Kickoff	Understanding Project	02-02-2026
Prototype/First Draft	Initial Dashboard	20-02-2026
Mid-Term Review	Feedback Improvements	10-03-2026
Final Submission	Completed Dashboard	28-03-2026
Presentation	Final Demo	30-03-2026

4b. Project execution details

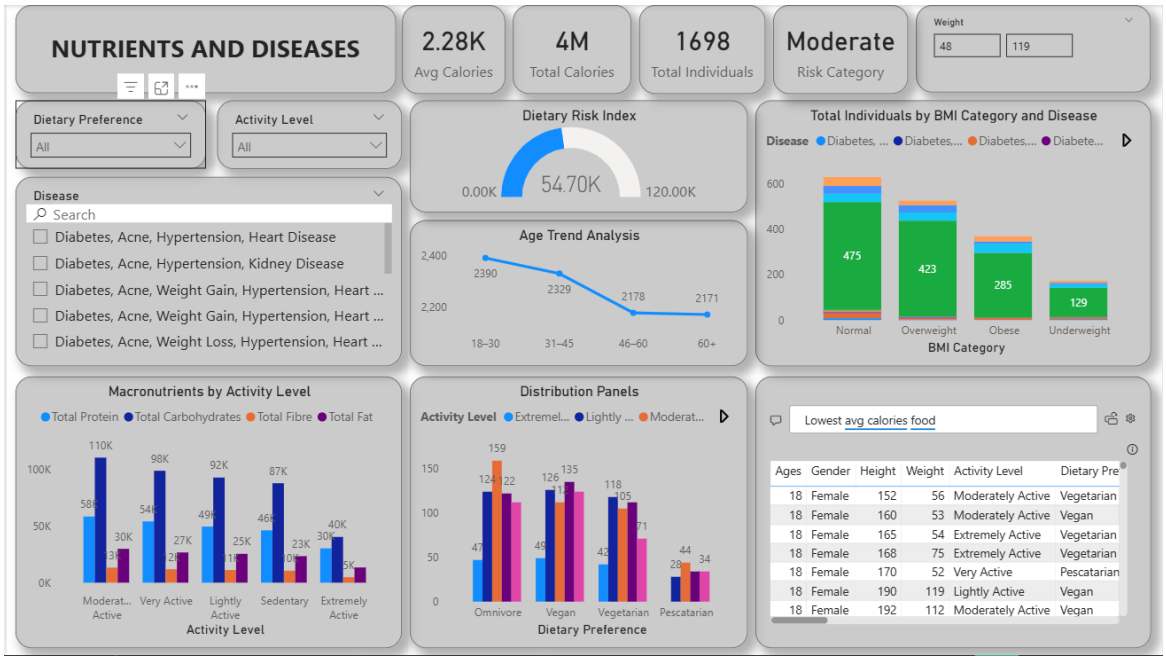
- Data was collected and cleaned using **Excel and Power Query**
- Built relationships between tables in **Power BI**
- Created **DAX measures** for calculations like calories, BMI, and risk index
- Designed **interactive dashboards** with slicers and filters
- Tested dashboards and improved usability in detail how this project was executed

4. Snapshots / Screenshots

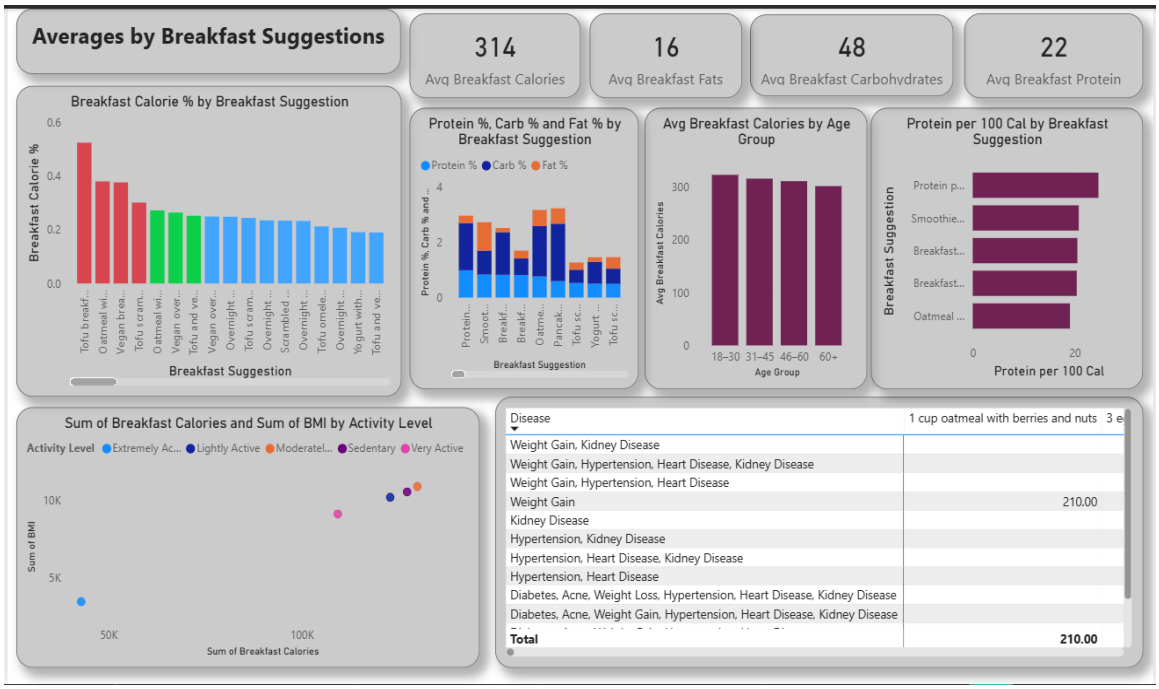
Dashboard -1



Dashboard – 2



Dashboard – 3



Dashboard – 4

5. Challenges Faced

- One of the major challenges faced during the project was handling **incomplete and inconsistent data**, which affected the accuracy of analysis. This issue was resolved by performing thorough **data cleaning and preprocessing using Excel and Power Query**.
- Another challenge was understanding and implementing **DAX calculations**, as they require strong logical thinking and context awareness. This was overcome through continuous **practice, learning, and applying DAX functions** in the project.
- Designing **user-friendly and visually effective dashboards** was also challenging, as it required balancing clarity and detail. This was improved by refining **dashboard layouts, selecting appropriate visuals, and enhancing interactivity** for better user experience.

6. Learnings & Skills Acquired

Technical Skills:

- Data modelling, transformation, and visualization
- Development of calculated metrics using DAX
- Dashboard design for non- technical audiences.

Soft Skills:

- Problem-solving under time constraints
- Effective team collaboration
- Communication, data storytelling & presentation skills

7. Testimonials from team

This internship was a highly enriching and valuable learning experience that provided hands-on exposure to real-world data analytics. Working on this project helped us understand how raw data can be transformed into meaningful insights that support effective decision-making.

Throughout the project, we gained practical experience in tools like Power BI, DAX, Excel, and Power Query, which strengthened our technical foundation.We also improved our ability to analyze data, identify patterns, and present insights in a clear and structured manner.

Collaborating with mentors and team members enhanced our communication and teamwork skills. We learned how to approach problems systematically, manage time efficiently, and adapt to challenges during the project.

One of the key achievements of this project was successfully developing interactive dashboards that provide insights into food trends, customer preferences, and health risks. This not only improved our data visualization skills but also boosted our confidence in handling real-world analytical tasks.

Overall, this internship played a significant role in bridging the gap between theoretical knowledge and practical application, and it has prepared all of us for future opportunities in the field of data analytics."

8. Conclusion

- The project successfully demonstrates the **practical application of data analytics** by transforming complex nutrition and lifestyle data into meaningful insights using interactive dashboards.
- It effectively achieved its objective by analyzing **food trends, customer preferences, and the relationship between BMI, lifestyle, and diseases**, providing clear and actionable outcomes.
- The use of tools like **Power BI, DAX, Excel, and Power Query** ensured accurate data processing, modeling, and visualization, justifying the reliability of the results.
- The implementation of **interactive dashboards and dynamic filtering** supports real-time, data-driven decision-making, making the solution practical and user-friendly.
- The project highlights the importance of **balanced nutrition and active lifestyles**, as the insights clearly show increased health risks associated with poor dietary habits and higher BMI levels.

- It has strong **real-world applicability** in areas like healthcare, fitness, and the food industry, where such insights can help in improving decision-making and planning.
- The internship experience helped in developing both **technical skills (data analysis, visualization, DAX)** and **soft skills (problem-solving, communication, data storytelling)**.
- Overall, the project aligns well with my **academic learning and career goals in data analytics and business intelligence**, preparing me for real-world challenges and professional growth.

9. Acknowledgements

We would like to express our sincere gratitude to **Infosys Springboard** for providing us with the opportunity to participate in this virtual internship. This platform played a crucial role in offering practical exposure to real-world data analytics projects, which is essential beyond theoretical learning. The structured learning environment and project-based approach helped us understand how industry-level solutions are developed, thereby justifying our appreciation for the organization.

We are especially thankful to our mentor for his continuous guidance, support, and valuable feedback throughout the internship. His mentorship was instrumental in helping us understand complex concepts such as DAX calculations, data modeling, and dashboard design. His timely suggestions and problem-solving approaches enabled us to overcome challenges efficiently, which significantly improved both technical and analytical skills. This consistent support justifies our gratitude towards him.

We would also like to thank each of our team members for their collaboration and cooperation during the project. Working as a team allowed us to exchange ideas, solve problems collectively, and learn from each other's perspectives. This collaborative environment contributed directly to the successful completion of the project, making teamwork an important aspect worth acknowledging.

Lastly, We are grateful for this internship experience as a whole, as it has enhanced our knowledge, strengthened confidence, and improved ability to apply data analytics concepts in practical scenarios. The skills and experience gained during this internship have played a significant role in shaping our professional growth and preparing us for future opportunities in the field of data analytics.
